

WANSTEAD FELLAS

APP ENGAGEMENT REVIEW · LAST 90 DAYS

P602 · ANALYSIS

What this is. A by-feature look at who's actually using the app, and what for. Data pulled live from the database on **24 Jun 2026** covering the last 90 days. Denominator throughout is **49** — players who both played in the last 90 days and have a working login (the realistic "could engage" set).

► The squad funnel

From everyone in the database, down to who can actually open the app.

► Headline engagement

► Every feature, ranked by reach

■ % of active & authed squad (49) using each feature · last 90 days

The pattern. Anything tied to [the night itself](#) (signing up, voting, predicting) lands. Anything that needs proactive effort with [no in-app payoff](#) (fitness, secondary position, profile completion) doesn't.

WANSTEAD FELLAS

P602 · ANALYSIS

FEATURE DEEP-DIVE · WHAT'S HEALTHY / WHERE IT BENDS

► MOTM / DOTD turnout per match

■ Distinct voters per match · % of eligible (confirmed players)

Bars show turnout %. Voting rework shipped **19 Jun** — first effect already visible on 18 Jun's 50%.

► Cup predictor · daily picks

■ 1,225 picks total · 28 distinct predictors · avg 44 picks per predictor

Picks per day, 6 Jun → 24 Jun. Massive spikes on group-stage match days (13/14/18 Jun).

► Profile completeness

■ Of the 57-strong active squad · how much have they filled in?

What stands out. Primary position at 88% is the position-nudge banner doing its job. **Secondary** at 4% — same field, one tap deeper — shows just how steep the drop-off is when a thing isn't visibly asked for.

THE FITNESS GAP · WHY IT ISN'T LANDING · WHAT TO DO

P602 · ANALYSIS

► The biggest gap: fitness uploads

FITNESS UPLOADERS

POLAR ACCOUNTS
LINKED

Only the admin uploads.

3 sessions, 90 days. 2 via **GPX file**, 1 via **Strava**. The Polar integration that the team built lives behind a button nobody has tapped.

The data is there, the parsing works, the suggestions engine works. People just aren't bringing it to the app.

► Why it isn't landing

1 · Discovery

Lives buried on the Cards page. Most opens are Sign-up, Match, Stats, Cup — nobody passes the upload button on a Thursday.

2 · Effort

Demands a GPX/TCX export, a Polar link, or manual entry. Compared to a 2-tap MOTM vote, it's a chore.

3 · No payoff

Upload doesn't update your card stats. Doesn't appear on Stats leaderboards. No "Most Distance Tonight" hero. You upload into a void.

4 · No nudge

No prompt Friday morning, no nag if you've signed up. Voting at least has the pinned ballot — fitness has nothing.

5 · No social proof

One uploader (the admin) means no peer pressure, no league table, no quiet shame in being the lazy one.

6 · Strava sync

Strava is where the data already lives for many. A "connect once, auto-pull Thursday's session" flow would beat any per-match upload prompt.

► What to do — three levers ranked by impact ÷ effort

1 Surface fitness on Stats & Cards HIGH IMPACT · LOW EFFORT

Add a "Most Distance Tonight" hero on Stats and a **k/m + avg HR** line on each Card. Suddenly uploading earns you something visible — same loop that made the 100% sign-up rate work.

2 One-tap nudge after the match HIGH IMPACT · MED EFFORT

Friday-morning nav badge on Cards: "Upload your stats from last night" — same play that fixed voting. Pair with a copy tweak that makes manual entry (km + minutes) acceptable for non-wearable owners.

3 Strava connect-once, auto-pull HIGH IMPACT · HIGH EFFORT

OAuth + webhook so a Strava activity tagged [Football](#) auto-imports against that Thursday. Solves the effort problem permanently for the ~half the squad already on Strava.

Other quick wins worth noting.

- **Secondary position prompt** (4% set) — add a one-line nag inside the position picker after primary is saved.
- **Profile photo prompt** (35% set) — pin a soft nudge on the Cards tab for the 37 players without one; photos drive identity, which drives engagement.
- **DOB / favourite club** (32% / 28%) — could batch into a 30-second "complete your card" flow at first login.

Data source · live DB pull · 24 Jun 2026 · denominator 49 authed-active.
