MOTM / DOTD · ENGAGEMENT REVIEW

P601 · ANALYSIS

Brief (19 Jun 2026): "MOTM and DOTD voting works but engagement isn't high. Looking at the UX, it feels sub-optimal. Review the workflow, layout and provide suggested improvements that will maximise engagement." This is the diagnosis that drove the June 2026 voting rework.

► The numbers

Turnout per completed match. **Eligible** = rostered players; **Voted** = distinct people who cast at least one vote.

MATCH	ELIGIBLE	VOTED	TURNOUT	MOTM	DOTD	DROP-OFF
18 Jun (9v9)	36	18	50%	17	13	-4
11 Jun	32	11	34%	11	6	-5
04 Jun	32	14	44%	14	10	-4
28 May	32	15	47%	15	8	-7
21 May	32	15	47%	15	9	-6

44%

AVG TURNOUT

Half the squad never votes.

~40%

DOTD DROP-OFF

Of MOTM voters bail before the second award.

11h

VOTE WINDOW

22:00 → 09:00. Most of it while you're asleep.

► Two distinct leaks

LEAK 1 · ACQUISITION

~Half the squad never votes at all

Average turnout sits at ~44%. The other half don't engage with either award — they're never in the funnel.

LEAK 2 · DROP-OFF

Quarter-to-half of MOTM voters bail before DOTD

28 May: 15 → 8. The second award, sitting below the first, lost people to scroll fatigue. Two awards × ~32 players ≈ 70 chips on screen.

► Why — structural causes

- **Overnight window.** Voting opened 22:00 match night, closed 09:00. Most of it while people are asleep. Miss it Thursday night → missed it.

- **No reminder of any kind.** No push, no nudge. A voter had to remember on their own, open the app, navigate to Match.
- **High voting effort.** Each award rendered **all** 32–36 players as an alphabetical wall of chips, no search, no grouping. Directly explains the DOTD drop-off.
- **No payoff loop.** Results only appeared after close, with nothing signalling they were in. You voted into a void.

Key insight: the match report is fully decoupled from voting — it publishes the instant an admin saves the result. So widening the voting window never delays the report; only the **award reveal** moves. This unlocks the biggest single lever at zero cost to the rest of the night.

► Prioritised levers

By impact ÷ effort. Shipped highlighted in **green**, partial in **yellow**, still open in **cyan**.

1 **Widen / re-time the window** **PARTIAL**

Biggest single lever, tiny change. Two independent knobs — **open time** (earlier = pure win, zero report cost) and **close time** (only delays reveal). Squad chose to keep it tight (close 10:00) so awards still land Friday morning.

2 **Add a reminder** **OPEN**

Highest impact, highest effort. PWA scaffolding (manifest + service worker) exists, so web-push is feasible. Cheaper interim: nav-badge on Match tab when you have an un-voted open ballot.

3 **Single-pass ballot** **SHIPPED**

Render the roster once, each player with a **+** and **-** button. Kills the DOTD drop-off directly.

4 **Cut the candidate wall** **SHIPPED**

Surface that night's goalscorers first with a **+** tag (and/or your team), "show everyone" expander, type-to-filter. Scanning 6 names beats scanning 36.

5 **Pin it open** **SHIPPED**

Default-expanded at the top of the Match tab while the window is live. Once closed, results return to the mid-slot.

► What shipped (19 Jun 2026)

- **Single-pass ballot** — one row per player, **+** **-** buttons, both awards cast in one scroll.
- **Goalscorers sorted to the top** with a **+** tag (from the goals table) so MOTM candidates surface without scrolling.
- **Search box** to filter the roster live.
- **Pinned open** while voting is live; collapses back to History-style mid-slot once closed.
- **Window close moved 09:00 → 10:00** the next day (open unchanged at 22:00 / full time).

► Still open (backlog)

Reminders — web-push at full time ("Vote for tonight's MOTM") and on results publish ("Emmanuel won MOTM"); or, cheaper, a nav-badge nudge on the Match tab. [This is the single biggest remaining lever.](#)

- **Social proof / light shaming** — "14 voted · 22 haven't" fits the fines-and-banter culture.
- **Voting streaks** — give the regulars something to defend.
- **Results-reveal moment** — make the award announcement feel like an event, not a quiet write to a row.
- **Context-mismatch bug** — [MotmVotingCard](#) loads the latest voting window independently of the displayed match. During an open window before the result is entered, the page shows last week's result + report with this week's ballot wedged in. Worth tightening when this area is next touched.
