GK RATINGS REVIEW · COMMITTEE SIGN-OFF

P516 · PROPOSAL

The ask. Sign off five proposed goalkeeper-rating tweaks based on the last ~11 matches of data (May 22 → Jul 2). Companion to the outfielder pass — same ~11-week window, same guard-rails, different signals. **Nothing goes live without committee green light.**

Tier movements if approved · 3 keepers upgraded. **Peter May** BRONZE → SILVER · **Paul Finch** STANDARD → BRONZE · **Callum Finch** STANDARD → BRONZE. The gloves have earned some recognition.

► How we decided

Three GK-specific signals:

- **Goals conceded per fixture** → the reflexes / positioning ratings
- **Clean-sheet %** → overall rating (a keeper's most honest scoreboard)
- **MOTM votes** → overall rating (keepers rarely win — when they do, it means something)

Guard-rails: minimum **4 appearances**; changes capped at **±2 per rating** per pass. Sample caveat: goals-conceded is a proxy — we don't yet record which keeper played which fixture, so it assumes they went the whole match. Fine for now (keepers don't rotate); will sharpen when we track it.

► The GK pool at a glance

BEST CONCEDED RATE

Peter May

0.83 /fx

BEST CS %

Peter May

42 % · 5 CS

MOST APPS

Paul & Callum

8 each

ONLY MOTM

Callum Finch

1 win · 5 votes

► Proposed changes (5)

PLAYER	POS	WHAT CHANGES	DECISION	WHY (DATA)
Peter May	GK	Overall 7 → 8 Positioning 8 → 9	☐ APPROVE ☐ DISCUSS ☐ DEFER	Best conceded rate (0.83/fx) and best CS % (42%) in the pool. 4 apps is smallish but coherent — capped off by the "Safe hands" call-out in the 2 Jul report as Daren's lot went unbeaten. Bronze → Silver .
Paul Finch	GK	Overall 6 → 7	☐ APPROVE ☐ DISCUSS ☐ DEFER	26 conceded in 24 fixtures (1.08/fx) with 9 clean sheets (38%). Quiet effectiveness — the results deserve tier recognition. Standard → Bronze .
Callum Finch	GK	Overall 6 → 7 Reflexes 6 → 7	☐ APPROVE ☐ DISCUSS ☐ DEFER	1 MOTM in 8 apps — keepers almost never win MOTM, so the 5 votes point at real shot-stopping quality above his current card. His CS rate is behind Paul's, so the reflexes bump reflects saves-made, not fewer-conceded. Standard → Bronze .

What this validates. Paul Finch's shot-stopping stats (reflexes 8, handling 9) and his low conceded rate line up — no change needed on those. Peter May's already-high positioning 8 gets nudged one notch rather than an overhaul. The **card SHO = 2 for Callum** (which correctly signals "he's a keeper, don't ask him to shoot") isn't touched. The current admin baseline was reasonable — this is a modest recalibration.

► Also worth knowing

- **Neil Perry has no GK card at all.** Listed as a GK, played 1 game, but all six goalkeeper attributes are null. Admin data-entry job — no rating call to make until the numbers exist.
- **Zac Hawkes & Alan Samuels — no data this window.** Both flagged as GKs on the books, neither has played in the last 120 days. Their existing admin-set cards stay as-is; we'll re-review if they turn up.
- **Which keeper played which fixture is currently a proxy.** If we start recording it (formation-per-fixture), the conceded numbers get more precise and Peter May's small sample stops mattering.
- **Auto-computed overall from GK stats — parked.** Committee discussed this and agreed the manual admin+committee-signoff loop is fine for now. Worth revisiting when peer ratings and the wider rating engine ship.

Tick the boxes · reply **APPROVE** in the WhatsApp group and the changes go live by end of week.

Questions on any single row → admin will bring the underlying numbers to the meeting.
