

ROADMAP

SNAPSHOT · 21 JUN 2026 (POST PLAYER CREDITS)

P703 · ROADMAP

What this is — a point-in-time render of `docs/ROADMAP.md`, the single source of truth for what's coming next. Updated continuously in the repo; PDF re-rendered when something material changes. Every idea sits here until it ships, then gets flagged and the commit hash logged.

► At a glance

SHIPPED

13

Carryover + block + relaxed + player credits

PROPOSED

44

Across 7 themes

BLOCKERS

3

Sequencing dependencies

► Status key

Proposed — captured in a doc or chat, awaiting agreement

In progress — being built right now

Blocker — dependency that gates other items

Scheduled — agreed, queued for build

Shipped — live on main

Known issue — bug or wart on the fix list

Identity · Preferred Position

8

4

1

Picker and DB are live. The visible payoff (position-aware cards, stats, balancer) is still to come.

ITEM	SOURCE	NOTES
DB columns: <code>preferred_position_primary + _secondary</code>	04 · 86c6edd	Backfilled from legacy <code>position</code>
PositionPicker component (4-button grid)	86c6edd	Reusable, supports compact mode
Profile page picker	86c6edd	Saves with the existing form
Next Game inline nudge for unset players	86c6edd	Dismissible per session
Admin position adoption tracker + <code>v_position_adoption</code> view	3a7d82f	Currently 49 / 59 = 83% set
Card: prominent position badge (primary + secondary chip)	04 · ace97e1	Colour per position; full + compact cards
Card: position-rank pill in footer (e.g. "#1 ATT · 14 goals")	04	Deferred — needs aggregated cross-player data
Position-aware Stats panels (Top 3 by position filter)	04 · 9e5979c	Chip strip filters every panel + hero strip
4th hero card on Stats — Top GK	04 · 9e5979c	Clean sheets leader · green tier
Position-weighted overall rating	04 · 06 p6	No more "60 ATT" dragging defenders down
Balancer hard constraint: ≥ 1 GK / ≥ 1 ATT / ≥ 1 DEF per team	04	Uses secondaries if short
Balancer soft constraint: MID count within ± 1 across teams	04	
Position-aware balancer ships only once $\geq 80\%$ of regulars have a position set	04	Currently 83% — bar cleared, chase the last 10

Operations · Balancer v2

7

Same 11 players, mathematically fairer teams. The 18 Jun match is the case study: SHO spread was ± 12 , with 3 swaps it would have been ± 3 .

ITEM	SOURCE	NOTES
Categorical balance — each attribute total within $\pm X$ across teams	07	Today balances overall sum only
Star cap (max 2 OVR ≥ 85 per team)	07	Stops talent stacking
Defender floor (≥ 1 with DEF ≥ 8 per team)	07	Most stompings = no defender
Simulated annealing algorithm	07	~ 1000 iter, < 100 ms
Rematch penalty — spread frequently-together players	07	Bonus social-mixing effect
Avg score-differential tracking (validation metric)	07	Target: drop $\sim 2.5 \rightarrow \sim 1.5$ goals
Admin escape hatch: drag-swap + regenerate button	07	Algorithm = suggestion, not mandate

Stats Theatre · Rating Engine

13

Card attributes are admin-set today. The plan turns them into live, derived values that reflect actual play. **Promised in user guide v4 page 6.**

ITEM	SOURCE	NOTES
SHO — goals / appearance (with form decay)	06 p6 · 07	Half-life ~ 6 weeks
DEF — inverse Wall + clean-sheet bonus	06 p6	Data already exists
PAC — max_speed_kmh from fitness sessions	06 p6	Only for tracked players
PHY — total distance $\times$ HR-zone workload	06 p6	Bayesian shrinkage if no fitness
PAS — aggregated peer-rating signal	06 p6	Depends on peer ratings shipping
DRI — stays admin-set	06 p6	No good honest signal
Position-weighted overall (not flat mean)	06 p6	See Identity theme
Form arrow on cards ($\nearrow$ / $\searrow$)	06 p6 · 07	4-match rolling vs season
"Why this rating?" tooltip with full breakdown	06 p6 · 07	Stops "algorithm is wrong" complaints
Bayesian shrinkage for low-appearance players	07	Under 3 apps $\rightarrow$ 70% blend to team mean
Hybrid admin baseline + $\pm N$ auto-adjustment	07	Cards drift ± 5 – 10 from admin baseline
Nightly cron + card_history table for delta log	07	<code>pg_cron</code> already in use for cup-sync
MOTM / DOTD influence capped at ± 5 on overall	07	Anti-gaming

ROADMAP · 3

ENGAGEMENT · COMMUNITY · DATA · ISSUES

P703 · ROADMAP

Engagement · Voting (and beyond)

6

Avg MOTM/DOTD turnout is **44%** after the June 2026 single-pass ballot redesign. The blockers below are what's left to lift it. [Until they ship](#), peer ratings would inherit the same 44% ceiling — so engagement levers go first.

ITEM	SOURCE	NOTES
Web push at full time ("Vote for tonight's MOTM")	eng. review	Highest-impact, highest-effort lever
Web push when results publish	eng. review	Closes the loop that today voids
Nav badge on Match tab when ballot open	eng. review	Cheaper interim before push
Voting streak counter (" 4 weeks in a row")	eng. review · 07	Loss aversion > novelty
Live social proof ("14 voted · 22 haven't")	eng. review · 07	Already partially in — lift visually
Results-reveal moment / Friday morning push	eng. review	Pairs with results-publish push

Community · Peer Ratings (revised)

5

1

Original proposal 07 had a new screen. Revised in-chat: extend the existing MotmVotingCard with a third inline column rather than build a new flow.

ITEM	SOURCE	NOTES
Third inline column on MotmVotingCard (/ /)	chat · 07	One extra optional tap per teammate
Default = , no added friction	chat	Voluntary; ballot still works if skipped
Cap influence at ± 2 per match, ± 5 cumulative on overall	chat · 07	Conservative; data is noisy
Bayesian shrinkage when < 5 voters	chat · 07	Sample-size guard
Feed balancer as small synthetic adjustment	chat · 07	Not a primary signal
Sequencing: engagement levers ship FIRST	chat	Below 65% turnout, peer-rating signal is too thin

Money & Enforcement

5

5

Keeping the books straight and chasing what's owed without admin having to nag manually.

ITEM	SOURCE	NOTES
Auto-charge £5 WTP fee on confirmed signup	migr 023 · 38be733	DB trigger; auto-reaps unpaid row on drop-out
Admin Finance: prior-month carryover surfaced inline	98eea49	" $+EX$ prior" per row; all-time sort
Unpaid signup block (2-week grace, DB + UI)	migr 026 · f75eef8	Blocked players can't confirm; admin override; auto-promotion skips them
Block-start cutoff (Jun 2026 onwards)	migr 027	May & earlier carryover still visible but doesn't gate signups
Player credits (overpayments + goodwill, green vs red)	migr 028 · c20bc79	Net balance everywhere; " $+ Credit$ " admin form; My Finances "In Credit" state
Auto-apply credit when payment recorded	chat	"Mike paid £5" → marks fine paid + adds £3 credit in one action
Make block-start cutoff a setting (not hardcoded)	chat	Move <code>block_start</code> to an editable setting
All-Time view toggle on AdminFinancePanel	chat	Aggregate per player across every month

Player-facing notice when grace is approaching	chat	"You owe £X — pay by Sat or you'll be blocked"
Stripe / online payment	chat	One-tap settle from the app

Data Quality

4

New signals the rating engine and balancer can use. Most are tiny additions to existing flows.

ITEM	SOURCE	NOTES
Position played per fixture — one-tap picker on match-entry	chat	Unlocks "GK 1 goal ≠ striker 1 goal"
Assists tracking	chat	Exploring Veo recordings + shirt numbers
Self-rated form — Wednesday "how are the legs?" poll	chat	→ balancer input
HR-zone fatigue index	chat	Flag "burnt", balance with extra runners

Known Issues

1

ITEM	NOTES
MotmVotingCard context-mismatch	Loads the latest voting window independently of the displayed match. During an open window before that night's result is entered, the page shows last week's result + report with this week's ballot wedged in. (eng. review §"Still open")

► Adding new ideas

1. Drop a row in the matching theme with status and a one-line note. If no theme fits, add a new one.
2. If the idea warrants a full proposal, build a primer-style PDF and add it to docs/primers/ as the next number; link from the row.
3. **When the item ships:** change status to , add the commit short hash, but leave the row in place.
4. **Don't delete shipped items.** The audit trail of what we set out to do vs what landed is the whole point.
5. Mark blockers explicitly with and link to the dependency. Sequencing matters more than priority.
