

WANSTEAD FELLAS

P900 · REVIEW

APP REVIEW · 10 JUL 2026

TL;DR — Three subagents ran in parallel across the whole app (15 pages + key components). **46 findings**. The **28 small** ones are already fixed in commit `5e5ac9f`. The **18 material** ones need a product decision and are listed below with concrete proposed fixes. Also shipped: a weekly GitHub Actions cron that produces a static churn/hot-file checklist every Monday at 07:00 BST so the loop is continuous.

PAGES REVIEWED

► Zone 1 · Core player pages (5 material)

#	FILE	CATEGORY	SUMMARY + PROPOSED FIX
1	<code>TonightPage.tsx:164</code>	FEATURE GAP	Last Result card only reads legacy <code>report_text</code> for its blurb. Since we retired that field in favour of structured <code>summary</code> , every new match now hides the blurb behind the generic "Match played — tap to view result" placeholder. Fix: fetch <code>summary</code> too and prefer it over <code>report_text</code> , keeping <code>report_text</code> as legacy fallback.
2	<code>TonightPage.tsx:1021</code>	UI INCONSISTENCY	<code><TierLegend /></code> sits at the very bottom of the page, but its own comment says it exists "so first-time users know what the colours mean without poking at every row" — needs to be visible before the Who's In list. Fix: move it just above the Who's In section header.
3	<code>ProfilePage.tsx:435</code>	UI INCONSISTENCY	ProfilePage is the only page in the app that skips CeefaxHeader — hand-rolls a back arrow + coloured "My Profile" tagline instead. Breaks the teletext pattern used on 12+ other pages. Fix: replace with <code><CeefaxHeader pageId="P501 · PROFILE" title="PROFILE" /></code> and drop the standalone Back button.
4	<code>ProfileCompletionCard.tsx:181</code>	UX FRICTION	The "Backup position" (pos2) row mounts the same <code>PositionPicker</code> as "Preferred position" (pos1), with the same <code>onChange</code> — so tapping either row shows a picker for both slots and the user has to figure out which chip controls which. Fix: either (a) collapse to one "Positions" row that marks complete when primary is set, or (b) pass a <code>secondaryOnly</code> prop to the pos2 picker.
5	<code>MotmVotingCard.tsx:324</code>	ACCESSIBILITY	The <code>/</code> vote pick buttons are 36×36 px — below Apple's HIG 44×44 pt minimum and WCAG 2.5.5's 44×44 CSS-px target. Two sit right next to each other, so on smaller phones mis-votes (DOTD instead of MOTM) are likely. Fix: bump to at least w-11 h-11 and increase gap.

► Zone 2 · Content pages (5 material)

#	FILE	CATEGORY	SUMMARY + PROPOSED FIX
6	FeedbackPage.tsx:79	UI INCONSISTENCY	FeedbackPage is the only content page that skips CeefaxHeader — bespoke masthead makes it look like a stranger in the app. Fix: <code><CeefaxHeader pageId="P810 · FEEDBACK" title="FEEDBACK" /></code> for both player + admin variants.
7	CupPage.tsx:162	UX FRICTION	Sweep tab renders nothing when SweepstakeCard has no entries or is still loading — SweepstakeCard returns <code>null</code> in both cases. Tapping "Sweep" shows a blank page. Fix: either show an "Sweepstake opens when admin seeds the draw" empty state at CupPage level, or have SweepstakeCard render its header + a placeholder body.
8	PodsPage.tsx:15	FEATURE GAP	Players without a favourite_club see no Your Club section and no prompt telling them setting one would unlock curated fan pods — the whole section silently vanishes. Fix: when <code>!profile?.favourite_club</code> , render a soft callout above "The Curated List" pointing them to <code>/profile</code> .
9	CardsPage.tsx:170	ACCESSIBILITY	Card-detail modal has no <code>role="dialog"</code> , no <code>aria-modal</code> , no <code>aria-labelledby</code> , no ESC-to-close, no focus trap. Screen-reader and keyboard-only users have no way to know it's open or dismiss it. Fix: add ARIA + ESC handler + move initial focus to Close button.
10	CupPage.tsx:913	ACCESSIBILITY	LeaderTable + BestStreakBoard render as nested divs with grid layouts — a proper <code><table></code> would give screen-reader users column semantics for RANK / NAME / % / STREAK / PTS. Fix: refactor to semantic table, keep grid CSS on <code><tr></code> .

► Zone 3 · Admin surfaces (8 material)

#	FILE	CATEGORY	SUMMARY + PROPOSED FIX
11	AdminMatchEntry.tsx:200	CONTENT	Match Report textarea still writes to legacy <code>report_text</code> — but per <code>CLAUDE.md</code> we now populate structured JSON (<code>summary</code> , <code>predictions</code> , <code>key_highlights</code>) and leave <code>report_text</code> NULL. Filling this field would double-render on the History/Match tabs. Fix: either retire the textarea entirely, or convert to write <code>summary</code> instead.
12	AdminMatchEntry.tsx:923	FEATURE GAP	The "Highlights" input writes to a <code>highlights</code> column that no surface renders — orphaned/stalled feature. Fix: either remove the input, or surface <code>highlights</code> on Match/History as a linked video chip.
13	AdminFinancePanel.tsx:257	DATA SAFETY	<code>markAllPaid</code> clears every unpaid fine + WTP across all months (not just the viewed one) with no confirmation. A misclick wipes months of chase state. Fix: inline confirm banner listing exactly what will be cleared, especially prior-month carryover.
14	AdminFinancePanel.tsx:815	DATA SAFETY	Fine / WTP / credit deletions fire from 16-18 px × buttons with no confirm, no aria-label, sitting directly next to the Mark Paid toggle. A fat-finger tap destroys the record instead of toggling paid state. Fix: inline confirm-per-row (or long-press pattern), plus aria-label + bigger tap target.
15	AdminFinancePanel.tsx:351	FEATURE GAP	No search/filter over the ~60-row finance list — admin scrolls to find the one they want. Sort is by net balance, not by name. Fix: top-of-list name search + quick-filter chips (Owed / In credit / Blocked).
16	AdminPage.tsx:219	FEATURE GAP	Same problem in the Players panel: no search over 60 rows. Fix: top-of-list search filtering by name/surname + quick-filter chips (SUB / WTP★ / WTP / missing card_* stats).

#	FILE	CATEGORY	SUMMARY + PROPOSED FIX
17	AdminTeamBuilder.tsx:594	UX FRICTION	Success banner "✓ Teams published and visible to players" is gated on <code>draftTeams.length === 0</code> , but <code>publish()</code> never clears <code>draftTeams</code> . So after a successful publish (first-time or re-publish) admin gets no explicit success confirmation — only the button label swap. Fix: clear <code>draftTeams</code> after publish OR drop the <code>length===0</code> gate; consider a transient toast too.
18	AdminMatchEntry.tsx:197	CODE QUALITY	Unused <code>nextThursday</code> prop had been quietly disabled with an eslint-suppress. Already fixed inline in the same commit — prop removed from the interface, destructure, and both callsites in <code>MatchPage</code> .

► What I fixed inline (28)

#	FILE	FIX
1-3	MorePage.tsx	HTML entity bug (<code>&amp;amp;</code> rendered literally as <code>&amp;</code>), misleading <code>A-Z</code> meta → <code>NAVIGATION INDEX</code>
4-5	ProfileCompletionCard.tsx	Garbled age blurb ("Exact DOB on Profile — or a decade below") + broken "All saves instantly" grammar
6-7	MatchPage.tsx	Garbled/duplicated comment block cleaned up, <code>Loading...</code> → <code>Loading...</code>
8-9	TeamsPage.tsx	<code>.single()</code> → <code>.maybeSingle()</code> (was throwing PGRST116 on any week without a match row — very common), hex <code>#444</code> → CSS var
10-13	ProfilePage.tsx	Every <code>#444</code> / <code>#9CA897</code> → <code>var(--color-text-muted)</code> (7 replacements) so DOB labels + child rows are actually readable on dark theme
14	PodsPage.tsx	Meta oversold a non-existent news feed → <code>PODCAST PICKS</code>
15-19	FeedbackPage.tsx	Hex → CSS vars, added loading placeholder before admin/player branch (fixes flash-of-wrong-form during profile load)
20-22	CardsPage.tsx	<code>undefined</code> · <code>Edit</code> guard for missing <code>age_group</code> , confirm on Remove photo, <code>saveEdit</code> error handling
23-24	StatsPage.tsx	Missing <code>aria-expanded</code> on Panel toggle, plumbed the declared-but-unused <code>unit</code> prop through to render
25	HistoryPage.tsx	Missing <code>aria-expanded</code> on match disclosure
26	AdminFinancePanel.tsx	Deleted a dead <code>? null : null</code> ternary
27	AdminMatchEntry.tsx	Removed unused <code>nextThursday</code> prop + cleaned callsites; also fixed a latent TS narrowing bug in the results payload
28	AdminPage.tsx	Confirmations on <code>deletePhoto</code> + <code>removeLink</code> (both were 1-tap destructive with no undo)

► Recurring loop

`scripts/weekly-review.mjs` + `.github/workflows/weekly-review.yml` land in the same commit as this review. Every **Monday 07:00 BST**, a static checklist gets committed to `docs/weekly-reviews/YYYY-Www.md` with:

- Bundle-size trend
- Top-3 hottest files this week (churn-ranked)
- TODO / FIXME markers, ranked by count
- Pages untouched > 30 days
- A copy-pasteable prompt to invoke a deep AI review on the week's hot files

Zero Anthropic API cost for the recurring loop — pure static heuristics. Deep reviews stay on-demand only, using this doc's shape (subagent-parallel + material-vs-small triage) as the template.
