Picker and DB live. The visible payoff (position-aware cards, stats, balancer) mostly landed; a few tail items remain.

ITEM	SOURCE	NOTES
 preferred_foot column on profiles	mig 046	left / right / both nullable; set on Profile or via nudge
 FootPicker component (3-option tap-cycle)	commit pending	LEFT / RIGHT / BOTH; mirrors PositionPicker
 Preferred-foot nudge on Next Game	commit pending	Yellow banner when null; dismissable per session
 Foot badge on PlayerCard (compact + full)	commit pending	Cyan LEFT / yellow RIGHT / green BOTH pill under position
 Balancer soft constraint: spread lefties	chat	Blocked on adoption $\geq 80\%$
 preferred_position_primary + _secondary	86c6edd	Backfilled from legacy position
 PositionPicker component (4-btn grid)	86c6edd	Reusable, compact mode
 Profile page picker	86c6edd	Saves with existing form
 Next Game inline nudge for unset players	86c6edd	Dismissible per session
 Admin position adoption tracker	3a7d82f	v_position_adoption ; currently 49/59 = 83%
 Card: prominent position badge (primary+secondary)	ace97e1	Colour per position; legacy fallback
 Card: position-rank pill in footer	primer 04	Needs cross-player aggregation; do on Profile first
 Position-aware Stats panels (Top 3 by position)	9e5979c	Chip strip filters every panel
 4th hero card for Top GK on Stats	9e5979c	Clean-sheet leader; green tier
 Position-weighted overall rating	primer 04/06 p6	Defender's low ATT stops dragging overall down
 Balancer position-aware distribution	commit pending	GK → ATT → DEF → MID snake with shared cursor + max cap
 Balancer soft: MID count within ± 1	primer 04	
 Position-aware balancer needs $\geq 80\%$ adoption	primer 04	Currently 83% — clears bar; chase the last 10

Same 11 players, mathematically fairer teams. Star cap + age spread shipped; two bugs found + fixed 30 Aug; validation still pending real 4-team data.

ITEM	SOURCE	NOTES
⚠ Review + prioritise auto-balance rules	chat 8 Jul · primer 07	Gating item; age band / foot / GK dist / local minima weaknesses on 9 Jul
● Categorical balance — each attr within $\pm X$	primer 07	Currently only minimises overall sum
✓ Star cap (max 2 OVR $\geq$ 9 per team)	commit pending · 14 Aug	Post-draft greedy position-preserving swap
✓ Age spread — over-40 count within ± 1	commit pending · 14 Aug	Same pass; kills "Aaron Franklin FC" nights
✓ Admin balance-preview chips (RTG / GK / 40+ / ★)	commit pending · 14 Aug	4 chips tint amber/red on violation; SW v45
✓ Bug: star cap silently disabled age pass	commit pending · 30 Aug	Loop break aborted both passes; fixed with independent latches
✓ Bug: star cap didn't scale with team count	commit pending · 30 Aug	Hardcoded 2 wrong both ways; replaced with <code>starCapFor(stars, teams)</code>
✓ Balancer logic extracted to <code>lib/balance.ts</code> + tests	commit pending · 30 Aug	Pure module, 8 tests; suite 73 → 81
⚠ Balancer v2 remains UNVALIDATED	chat 30 Aug	Only 2 games under it, both 2-team; can't measure founding metric
⚠ 19 players on default ratings	primer 27	Blocks re-measurement; <code>effectiveAttrs</code> needs <code>card_*</code> stats, not just overall
● Defender floor (≥ 1 with DEF ≥ 8 per team)	primer 07	Most stompings = no defender
● Simulated annealing algorithm	primer 07	~1000 iter, <100ms
● Rematch penalty — spread frequent partners	primer 07	Bonus social-mixing effect
● Avg score-differential tracking (validation)	primer 07	Target: drop ~2.5 → ~1.5 goals
● Admin escape hatch: drag-swap + regenerate	primer 07	Algorithm as suggestion, not mandate

Card attributes are admin-set today. The plan turns them into live, derived values that reflect actual play. **Promised in user guide v3 page 6.**

ITEM	SOURCE	NOTES
● SHO ← goals / appearance with form decay	primer 06 p6 · 07	Half-life ~6 weeks
● DEF ← inverse Wall + clean-sheet bonus	primer 06 p6	Data already exists
● PAC ← <code>max_speed_kmh</code> from fitness	primer 06 p6	Only for tracked players
● PHY ← distance × HR-zone workload	primer 06 p6	Bayesian shrinkage if no fitness
● PAS ← aggregated peer-rating signal	primer 06 p6	Depends on peer ratings shipping
● DRI ← stays admin-set	primer 06 p6	No good honest signal
● Position-weighted overall (not flat mean)	primer 06 p6	See Identity theme
● Form arrow on cards (↗ / ↘)	primer 06 p6 · 07	4-match rolling vs season
● "Why this rating?" tooltip breakdown	primer 06 p6 · 07	Transparency stops complaints
● Bayesian shrinkage for low-appearance	primer 07	Under 3 apps → 70% blend to team mean
● Hybrid admin baseline + $\pm N$ auto-adjust	primer 07	Drift ± 5 –10 from baseline
● Nightly cron + <code>card_history</code> delta log	primer 07	<code>pg_cron</code> already in use
● MOTM / DOTD influence capped ± 5	primer 07	Anti-gaming

44% turnout ceiling; peer ratings gated on lifting engagement first. Push infra shipped 5 Jul + preferences UI 30 Aug — theme unblocked.

ITEM	SOURCE	NOTES
✓ Web push at full time ("Vote for tonight's MOTM")	migs 047+048 · f3c3285	pg_net → edge fn → web-push VAPID; verified on iOS 18.7
✓ Web push when results publish	migs 047+048 · f3c3285	AFTER UPDATE trigger on results_published flag
✓ Nav badge on Match tab when ballot open	commit pending	Red dot; refreshes 60s; clears on vote/close
✓ Voting streak counter ("🔥 4 weeks")	a809deb	Chip on MotmVotingCard; skips non-rostered; shown ≥2
● Live social proof ("14 voted · 22 haven't")	eng. review · 07	Partially in; lift visually
● Results-reveal moment / Fri morning push	eng. review	Pairs with results-publish push

Additional push notifications (extends the pipeline)

4-push-per-week guard-rail was the design constraint; preferences UI (mig 081) unblocked layering more. Every new push declares a category — [match_night](#) · [results](#) · [money](#) · [club_news](#) · [predictor](#) — or is justified as always-on.

ITEM	SOURCE	NOTES
✓ Player notification preferences UI	commit pending · mig 081	5 categories not per-topic; absence=all-on; keyed on player_id
✓ Audience resolver push_targets()	commit pending · mig 081	Security-definer; single place applies roster+preference gates
✓ Bug: admins missed pushes on off-weeks	commit pending · mig 081	p_include_admins=true rides admins past roster gate
✓ Revert 13 Aug teams_ready widening	commit pending · 30 Aug	Never deployed; club-wide push would kill adoption
✓ Always-on tier (call-ups can't be muted)	commit pending · mig 081	Dropout + waitlist bypass prefs via p_category=null
● Match-report push (summary NULL → not-NULL)	chat	New topic 'report'; ~10 min
● Sign-up deadline reminder 2h before lock	chat	pg_cron Wed 20:00 London; roster filter
● Teams-published push	chat	Nice-to-have but low-signal
● ⚽ Waitlist promotion push	chat 30 Aug	Highest-value gap. Mig 030 promotes silently today; always-on tier
● 🏥 Injury return-date reminder	chat 30 Aug	Wed cron for mig 078 return-Thu; category match_night
● 🏠 WTP charge notification	chat 30 Aug	Migs 023/043/044 debit silently; kills disputes; money
● 🌃 Theme of the Night reveal	chat 30 Aug	Mig 060 only discovered on open; match_night
● 📺 Sign-up is open	chat 30 Aug	No announce of window; match_night
● 📄 Monthly round-up published	chat 30 Aug	PDF on 1st with nobody told; club_news
● 📇 Your card's been updated	chat 30 Aug	Rating changes invisible; club_news
● Voting-close warning ("2 hours left")	chat 30 Aug	Lower priority; results
● Milestone pings (50th app, unbeaten run)	chat 30 Aug	Nice-to-have; club_news
⚠ Sequencing: opt-out-per-type vs opt-in	chat	Loose consensus opt-out; revisit before prefs UI

Primer 07 proposed a new screen. Revised in-chat: extend MotmVotingCard with a third inline column, not a new flow.

ITEM	SOURCE	NOTES
Third inline column (great · OK · off)	chat — 07	One extra optional tap per teammate
Default = , no added friction	chat	Voluntary, ballot works if skipped
Cap ±2 / match, ±5 cumulative on overall	chat · 07	Conservative; data is noisy
Bayesian shrinkage when <5 voters	chat · 07	Sample-size guard
Feed balancer as small synthetic adjustment	chat · 07	Not primary signal
Engagement levers ship FIRST	chat	Below 65% turnout, signal too thin

7

8

Keeping the books straight and chasing what's owed without admin having to nag manually.

ITEM	SOURCE	NOTES
Auto-charge £5 WTP on confirmed signup	mig 023 · 38be733	DB trigger; auto-reaps unpaid on drop-out
Prior-month carryover surfaced inline	98eea49	"+£X prior" per row; sort by all-time
Unpaid signup block (2-week grace)	mig 026 · f75eef8	Blocked can't confirm; admin override; skips auto-promo
Block-start cutoff (Jun 2026 onwards)	mig 027	Pre-cutoff visible but doesn't gate signups
Player credits (overpayments + goodwill)	mig 028 · c20bc79	Net balance shown; admin "+ Credit" button
DB-side auto-promote top reserve on drop	mig 030	Charlie 24 Jun bug; mirrors pickPromotion
Club Finances tracker v1	mig 052 · 12 Jul	Admin → Club tab; subs income + pitch hire; backfilled 45 subs + 13 pitch rows
Make block-start cutoff a setting	chat	Move block_start to editable settings
All-Time view toggle on AdminFinancePanel	chat	Full chase list across months
Player-facing grace-approaching notice	chat	"Pay by Sat or blocked from Thu"
Club Finances v2: player sub status card	chat 12 Jul	"Paid £95 on X, next Y" card on Profile
Club Finances v2: WTP + fines fold in	chat 12 Jul	v1 balance is subs-vs-pitch only
Club Finances v2: admin UI for ad-hoc expenses	chat 12 Jul	Schema supports; deferred until needed
Stripe / online payment	chat	One-tap settle
Auto-apply credit when payment recorded	chat	"Mike paid £5" → marks fine + adds credit

Delegate Roles

1

3

Granular permissions so admin can hand off narrow tasks without minting a full admin.

ITEM	SOURCE	NOTES
can_enter_results delegate role	mig 033 · 9c8e0a8	Ross Marks granted; RLS helper can_manage_results()
Admin UI to toggle delegate roles per player	chat	Avoids manual SQL
Indicator on Admin profile showing holders	chat	"Score entry: Ross Marks" — easy audit
Additional delegate roles as needed	chat	Same helper-fn pattern

Feature Announcements

✓ Admin tab blank-screen crash (2 Aug)	commit pending · mig 073	Rossini null surname → <code>null.trim()</code> in <code>AdminCsvImport</code> ; NOT NULL default; <code>RouteErrorBoundary</code> ; SW v43
✓ Duplicate "match report is live" push	migs 075 → 076 → 077	Landed on <code>max(voting_close, report_completion)</code> ; each trigger checks the other; single push guaranteed

► Adding new ideas

1. Drop a row in the matching theme with status ● and a one-line note. If no theme fits, add a new one.
2. If the idea warrants a full proposal, build a primer-style PDF and add it to [docs/primers/](#) as the next number; link from the row.
3. **When the item ships:** change status to ✓, add the commit short hash + migration num if there's DB work, but leave the row in place.
4. **Don't delete shipped items.** The audit trail of what we set out to do vs what landed is the whole point.
5. Mark blockers explicitly with ⚠ and link to the dependency. Sequencing matters more than priority.
